Professional Summary

Highly motivated and passionate Web Developer with a strong proficiency in HTML5, CSS3, JavaScript, Python, Django, and MySQL database. Additionally, seeking to leverage and enhance my skills in developing elegant and efficient solutions, with a commitment to continuous learning and adapting to the latest technologies for impactful contributions.

Professional Experience

-

Education

samskara bharathi high school ssc GPA: 98	2019-2020
samskara bharathi jr college intermediate GPA: 94	2020-2022
GMR institute of Technology Btech GPA: 95	2022-2026

COURSE HANDOUT

B. Tech – 5th Semester

Course Title : **Artificial Intelligence and Machine Learning Lab** Date: 31.07.2023
Course Code : 21CS507 Academic Year: 2023-2024
Course Structure : 0-0-3-1.5
Course coordinator : Dr. M. Satish
Instructor(s) : Dr. P. Kanchanamala, Dr. M. Satish, Mrs. T. Daniya

Course Description: The Artificial Intelligence and Machine Learning Lab course is a hands-on companion to the theoretical concepts covered in the AIML theory course. This lab-based course is designed to provide students with practical experience in implementing, experimenting with, and analyzing various rule-based, classification, clustering algorithms and techniques. Through a series of guided exercises and augmented project students will gain the skills and confidence needed to apply AI and ML methods to real-world problems.

Scope and Course Objective: The scope of an Artificial Intelligence and Machine Learninglab course is to provide hands-on experience and practical skills to complement the theoretical knowledge gained in the classroom. Lab courses play a crucial role in helping students apply AI and ML concepts to real-world problems, enhance their technical abilities, and prepare them for careers in various industries. AIML lab course is focused on providing students with practical skills, hands-on experience, and a deeper understanding of implementing AI and ML techniques in real-world scenarios. This lab course aims to bridge the gap between theoretical knowledge and practical application, enabling students to effectively utilize AI and ML tools and methods.

Lab Manual

1. Artificial Intelligence and Machine Learning Laboratory – Department of CSE, GMRIT, Rajam

Text Book (s)

1. Russel Norvig, Artificial Intelligence A modern Approach, 3rd Edition, Pearson Education 2010
2. Stephen Marsland- Machine Learning – An Algorithmic Perspective – Second Edition – Chapman & Hall CRC Press, 2015

Reference (s)

1. E. Rich K. Knight and B.Nair – Artificial Intelligence– Third Edition – Tata McGraw Hill, 2017
2. Tom M. Mitchell, —Machine Learning, McGraw-Hill Education (India) Private Limited, 2013.

Course Outcomes

At the end of the course, the students will be able to:

1. Design and develop problem statements for solving real time problems using expert systems
2. Outline the role of data repositories and various data preprocessing tools
3. Illustrate the use of consistent data in implementing machine learning algorithms
4. Distinguish valid datasets for the machine learning algorithms
5. Identify and develop various machine learning algorithms suitable to the problem statement
6. Demonstrate and resolve complex clusters using dimensionality reduction

CO–PO Mapping

CO	PO ₄	PO ₅	PO ₈
1	3	2	2
2	3	3	2
3	3	1	3
4	2	2	2
5	2	2	3
6	1	2	3

3–Strongly linked | 2–Moderately linked | 1–Weakly linked

List of Experiments

Expert System

Week 1: Develop a Rule Based system (Consider any Problem from the Annexure any Real Time)

Data Pre-Processing and Data Pre-Processing Tools

Week 2: Importing Datasets, Missing Data, Feature Encoding, Handling Outliers

Week 3: Splitting Datasets to Training Dataset and Test Dataset, Feature Scaling, Data Sampling

Classification:

Week 4: K-Nearest Neighbor(K-NN) Classifier

Week 5: Support Vector Machine Classification

Week 6: Naïve Bayes Classifier

Week 7: Decision Tree Classification

Regression

Week 8: Simple Linear Regression

Week 9: Multiple Linear Regressions

Week 10: Polynomial Regression

Week 11: Logistic Regression

Clustering

Week 12: Association Rule Learning

Week 13: K Means Clustering

Week 14: Hierarchical Clustering

Dimensionality Reduction

Week 15: Principal Component Analysis

Week 16: Linear Discriminate Analysis

Course Plan

Lab Session No.	Learning objectives	Topic(s) to be covered
1.	Introduction	Installation of Python Tool, Anaconda navigator and Related Tools.
2.	Develop an Expert System	Week 1 To develop a Rule Based system (Consider any Problem from the Annexure any Real Time)
3.	To Apply the Data Pre-Processing and Data Pre-Processing Tools	Week 2 Importing Datasets, Missing Data, Feature Encoding, Handling Outliers
4.		Week 3 Splitting Datasets to Training Dataset and Test Dataset, Feature Scaling, Data Sampling
5.	To Explore the Classification Algorithms.	Week 4 K-Nearest Neighbours
6.		Week 5 Support Vector Machines
7.		Week 6 Naïve Bayes
8.		Week 7 Decision Tree Classification
9.	To Apply the Various Regression Techniques.	Week 8 Simple Linear Regression
10.		Week 9 Multiple Linear Regressions
11.		Week 10 Polynomial Regression
12.		Week 11 Logistic Regression
13.	To Build a Model for Clustering Techniques	Week 12 Association Rule Learning
14.		Week 13 K Means Clustering
15.		Week 14 Hierarchical Clustering
16.	To Analyze the Dimensionality Reduction Concepts.	Week 15 Principal Component Analysis
17.		Week 16 Linear Discriminate Analysis
18.	Internal Lab Exam	

Annexure:

1. Banking System
2. Weather System
3. Medical System
4. Gaming System
5. Dressing System
6. Disease Diagnose or Prediction System

Augmented Experiments: (Students shall opt any one of the Augmented Experiments in addition to the regular experiments)

1. Rule Based Expert System: Design, Suiting and Shirting for an event/occasion
2. Gaming: Chess, Water Jug Problem, 8 Queens Problem
3. Real Time: Traffic Lights
4. Real Time: Banking Transactions (Only Debit and Credit)
5. Mathematical Approach for Theorem Proving
6. Financial Approach for Loans via Cash / Vehicle / Gold
7. Medical Expert Systems
8. Disease Classification Strategies
9. Disease Prediction Strategies
10. Work on a Real Dataset

Evaluation Scheme:

Component	Duration (minutes)	Marks	% Weightage	Date & Time	Venue
Day to Day Performance	120	10+5	20	07.08.2023 to 18.11.2023	5 th Block
Internal Lab Test	180	5	6.67	20.11.2023 to 25.11.2023	
Augmented Experiment	---	5	6.66	30.11.2023 to 06.12.2023	
Semester End Exams	180	50	66.6	11.12.2023 to 16.12.2023	

Chamber Consultation Hour: Every Tuesday 4.00 PM to 5.00 PM

Venue: CSE Staff Room

Notices: CSE Notice Board

Signature of the Instructors

a. Dr. P. Kanchanamala

b. Mrs. T. Daniya

Course-Coordinator

Dr. M. Satish

HOD-CSE

Dr. A. V. Ramana
